Project Description!

In this CX analytics project, we will delve into the world of customer experience by analyzing a dataset spanning 23 days, focusing on the inbound calling team of a company. The dataset contains essential details such as agent information, queue times, call timestamps, call durations, and call statuses. Specifically, we'll spotlight the pivotal role of customer service representatives in managing inbound customer support, aiming to engage and delight customers and foster their loyalty to the business.

Table of Contents

I Introduction
Project description and
Tech Stack Used

3 Insights Summarize the insights and knowledge gained during the project.

2 Analysis

- A. Average Call Duration
- B. Call Volume Analysis
- C. Manpower Planning
- D. Night Shift Manpower Planning

4 Conclusion

Described what I have achieved through the project

Tech Stack Used:-

- -> Excel
- -> PowerPoint
- -> Github
- -> Google Drive

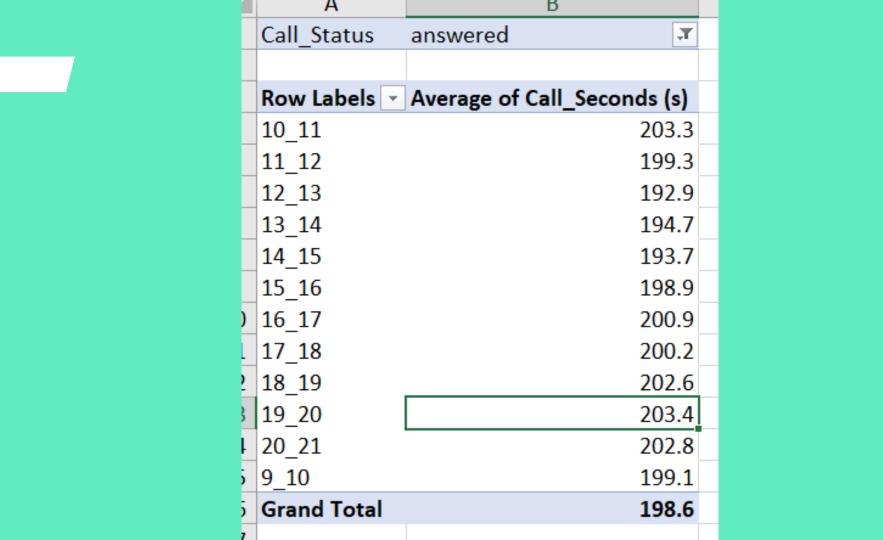

A Average Call Duration

Determine the average duration of all incoming calls received by agents.

Average Call Duration

- To find the Average Call Duration first I created a new pivot table using the raw data.
- Then, I added Time Bucket to the rows.
- I used Call_Status as a filter for filtering data. Since we have only asked for the call that are answered.
- And in values area I have added Call_seconds. And calculated the Average value of Call seconds.
- Then finally I got the Average Call Duration of all incoming calls received by agents.
- This duration is calculated for each time bucket.

Call Volume Analysis

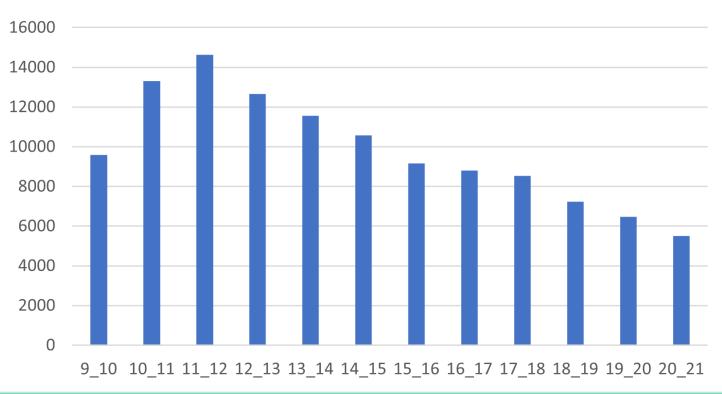

Visualize the total number of calls received.

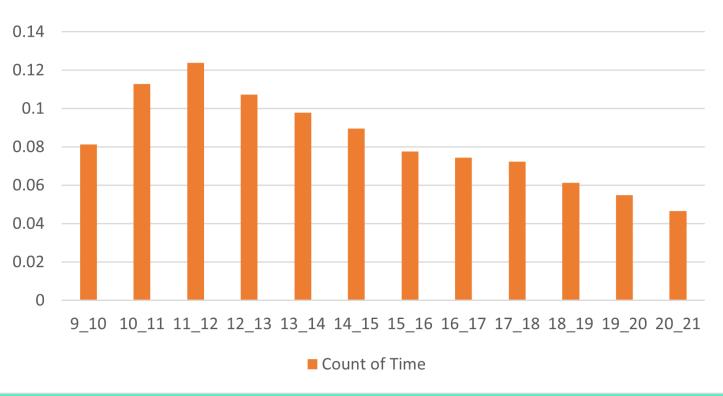

Call Volume Analysis

- To perform Call Volume Analysis first I created a new pivot table using the raw data.
- Then, I added Time_Bucket to the rows.
- For columns I used Values of Time and Customer_Phone_No.
- And in the values area, I have added Time and Customer_Phone_No. And calculated the Count of those variables.
- Then finally I got how many calls I made for each time_bucket and what percentage it represents.
- > This duration is calculated for each time bucket.
- Lastly, I have represented the result in the form of Bar Chart.

Manpower Planning

To calculate the minimum number of agents required in each time bucket to ensure that at least 90 out of 100 calls are answered.

Manpower Planning

- First, I have calculated how many hours an agent works on Average daily.
- ➤ I got that an agent on average works 4.5 hours daily. And they work for a minimum of 20 days in a month.
- > Then, I created a new pivot table by selecting all the raw data.
- Then, I added Date_&_Time to the rows.
- For columns I used Values of Duration(hh:mm:ss).
- Then I calculated the Average call on a daily basis for all Call_Status types.
- Then I calculated the Time Requirement to Answer 90% of the call using the following formula.
- > =E59*198.6*0.9/3600
- Lastly, to find the total number of working persons required per day. I divided the time required to answer 90% of the calls by the total hour calls attended by the agents.

Result

Average Time Taken to Answer a Call	198.6
Time Requirement to Answer 90% of the call	254.7001826
Total Manpower Required Perday	57

Night Shift Man power Planning

Creating a manpower plan for each time bucket throughout the day, keeping the maximum abandon rate at 10%.

Night Shift Manpower Planning

- > This is the extended question to the previous question.
- > Thus, I duplicated the previous sheet and calculated the Night Shift manpower planning.
- \triangleright Then, as we know about 30% of calls are Call Volume at Night(9 PM 9 AM).
- I calculated it by taking 30% of total calls daily.
- Then I calculated the Additional Hours Required using the following formula.
- > =B69*198.6*0.9/3600
- Lastly, to find the total number of working persons required for the Night Shift. I divided the additional hours required to answer the calls by the total hours of calls attended by the agents.
- Then by using the total calls distribution table given in the question by time_buckets. I calculated the Total Additional hours using the following formula.
- > =\$B\$70*B81/30
- And Lastly calculated the Required_Agents using =D81/0.6 as each agent can be active on call only for 60% of time.

Morning Shift Manpower Planning					
Average Time Taken to Answer a Call	198.6				
Time Requirement to Answer 90% of the call	254.7001826				
Total Manpower Required Perday	57				

Night Shift Manpower Planning					
Call Volume daily(9 AM - 9 PM	5130				
Call Volume in Night(9PM - 9A	1539				
Additional Hours Required	76.41005478				
Additional Head Count	17				
Total Head Count	74				

Distribution of Required_Agents across each Time_Bucket

Time_Buckets 🔻	No_of_Calls	Time_distribution 🔻	Total_Additional_hours 🔻	Required_Agents -
21_22	3	10%	7.64	13
22_23	3	10%	7.64	13
23_24	2	7%	5.09	8
00_01	2	7%	5.09	8
01_02	1	3%	2.55	4
2_3	1	3%	2.55	4
3_4	1	3%	2.55	4
4_5	1	3%	2.55	4
5_6	3	10%	7.64	13
6_7	4	13%	10.19	17
7_8	4	13%	10.19	17
8_9	5	17%	12.74	21
Total	30	100%	76.41	127

Conclusion

- Thus, I have completed a Call Volume Trend Analysis.
- Given key findings and all meaningful trends or patterns I have discovered.
- ❖ I have learned to use Excel formulas and Pivot tables to analyze the dataset.
- GitHub Repository and drive links are given as follows.

GitHub Repository:- https://github.com/ShindeYash/ABC_Call_Volume_Trend.git

Excel Worksheet:- https://docs.google.com/spreadsheets/d/1tZ8Ac_lgpyuS8OM-dpL6ROi267wYDAEG/edit?usp=sharing&ouid=104957742252162470359&rtpof=tru=88cd=true

Drive Link:-

https://drive.google.com/drive/folders/1JyZV5MwtrUY1I9D_W0g3Z9wZqXSnaz4G?usp=sharing

Video Presentation:-

https://www.loom.com/share/5d2280b814304e439ec37c61cc287731?sid=b3ea99be-43q2-4cd6-88a4-bca75f389587

Thanks!
